**SPONSORSHIP PACKAGE**

**2023-2024**

# ABOUT US

WatDig is a University of Waterloo Student Team part of the Sedra Student Design Centre. Our team, overseen by Prof. Peter Teertstra, Ph.D., P.Eng., is currently entering our second year of competition in the **Not-A-Boring Competition**, hosted by The Boring Company.

This year, we are excited to announce our participation in the Tunnel Boring Challenge. Our team will be developing a cutting-edge **Tunnel Boring Machine** capable of autonomously excavating, propelling itself underground, and lining the tunnel. The competition will feature multiple design briefings and culminate in a week-long event hosted at The Boring Company's manufacturing and testing facility located in Bastrop, Texas.

Our team consists entirely of students from the Engineering Faculty here at the University of Waterloo. With backgrounds in **Mechatronics, Electrical, and Mechanical Engineering**, our team is highly capable, qualified, and committed. After winning the 1st place in the navigation mini-competition in NaBC 2024, we aim to compete in the full-scale competition for NaBC 2025.

## WHY SPONSOR US?

WatDig is a new leading design team at the University of Waterloo, a school with a history of **prestige and excellence in student design competitions**. We are aiming to compete in a competition as the first Canadian team and build a machine no other Canadian university student has built before. Partner with our team to gain access to some of the top-talent in the Engineering field looking for internship opportunities year-round. Supporting WatDig means building a long lasting **relationship with the top Engineering school in Canada**.

## HOW YOU CAN HELP

Your support allows students to realize their full potential and grow into the next generation of engineers. To do develop a fully operational tunnel-boring machine to compete in NaBC 2025, we aim to raise \$40 000 in sponsorship this year.

Our team accepts In-Kind sponsors as well as monetary sponsorship. Electrical components, hydraulic parts, stock materials and machining services will be of utmost importance to our team. Reach out to us for more information on how your company can support our team!

Financial contributions will be used to buy sensors, materials, components and machine parts. All expenditures will be shown back to our sponsors at the end of the year in a comprehensive transparency report.
